

New Low GWP Refrigerant

Meets USA EPA and Environment Canada 2016 Proposed ruling.

Refplus approves the following modern refrigerants to their medium and low temperature refrigeration evaporators, condensers and condensing units.

The following refrigerants can be used:

- **Honeywell Solstice N40 (R448A) GWP 1273**
- **Dupont Opteon XP40 (R449A) GWP 1397**

They are replacements for **R-22, R404A, R507** and **R407A/C/F**.

They offer a similar capacity of **R404A** with a reduced energy requirement and with a glide of $\pm 7^{\circ}\text{R}$ (4°K).

Use suffix **6** (same as **R407A/F**) for your condensing units. Use the same operational requirement.
